

Brian Mathew

PRODUCT SUPPORT · APPLICATION TROUBLESHOOTING · TECHNICAL DOCUMENTATION

New Jersey · (609) 815-1685 · mathew.brian@gmail.com · github.com/bmath8 · bmath8.vercel.app

SUMMARY

Customer-focused technical builder with a background leading retail sales, coordinating small teams, and solving problems directly with customers. Designs, tests, documents, and operates real software — with hands-on skill in application troubleshooting, validation, APIs, and clear technical writing. Known for isolating the real problem and following through to a verified fix.

SELECTED PROJECTS

Independent builds · 2025–Present · live at bmath8.vercel.app

AI Job Hunter — *truth-constrained application workflow*

- Built a Flask / SQLAlchemy web app that turns a job posting and a base resume into review-ready, ATS-optimized materials — **without inventing education, employment, or results**.
- Wrote a keyword-match engine that scores a resume 0–100 against a posting and flags the exact missing keywords; integrated provider-agnostically over GPT-4 and Claude.
- Separated generation, job-match analysis, validation, and application tracking into independent components so problems can be isolated and tested one stage at a time. Dockerized with a one-click Render deploy.

Brian OS — *Windows automation & operational recovery*

- Built and operate an always-on fleet of **25 scheduled agents** on a local LLM (Ollama) that prepare briefs, watch system health, and accept two-way commands over Telegram — actions that send, spend, or delete are **draft-only until approved**.
- Diagnosed a failed process guardian that left orphan processes and exhausted disk space; traced the root cause, recovered the machine, restored monitoring, and added liveness checks to prevent recurrence.
- Backed by an automated test suite (81 tests) and CI; run daily on my own machine.

BoomBox — *real-time collaborative music app*

- Built a full-stack social music prototype (Next.js, React, TypeScript, Supabase/PostgreSQL) for shared queues, collaborative playlists, and synced live listening.
- Separated durable Postgres data from transient WebSocket + Redis Pub/Sub state so saved product data and live interactions have clear, independently testable responsibilities.
- Treated observability and security as first-class: health checks, metrics, rate limiting, row-level security, and CI/CD.

SKILLS & CAPABILITIES

Support & Service: Application troubleshooting; issue reproduction & problem isolation; customer communication; technical documentation

Systems & Tools: Python; Flask; SQL; APIs / JSON; TypeScript; React; Git / GitHub; Windows; PowerShell; Docker

Quality & Operations: Automated testing & smoke checks; validation workflows; failure diagnosis & recovery; process monitoring

CUSTOMER & OPERATIONS EXPERIENCE

Best Buy — *Appliances Department Lead*

Earlier Experience

- Led the appliances department during a year it ranked **first in the territory** for sales.
- Guided customers through high-consideration purchases by identifying needs, explaining products clearly, and coordinating across departments to keep work moving.

Uber — *Independent Driver*

2022

- ~1 year of sustained, independent, customer-facing work — managing routes, schedules, and changing customer needs without direct supervision.

ADDITIONAL EDUCATION

Penn State Berks — additional undergraduate study · The City College of New York — additional undergraduate study
